

Next Education Conducts Teachers Enrichment Workshop Programme

JATINDER BHATIA

Monday, November 18, 2013

Next Education **India**, one of India's leading digital education company, in an initiative to provide teacher-enrichment programmes had conducted a one day workshop on '**Engaging The Young Minds Through New Age Teaching Pedagogies**' today at New Delhi.

Next Education had launched a series of of workshops for Teachers' Enrichment programmes under **Next Deeksha**, a one of its kind initiative. These workshops are focused to help the faculty to deliver better in the modern changing academic milieu. **Prof.(Dr.)**

B.L.Handoo and **Dr.Dheeraj Mehrotra**, who are distinguished academicians and the esteemed members of Next Deeksha conducted the workshop to prepare teachers on the rapidly evolving education system.

The session had delivered Effective Teaching and Classroom Management Techniques to the target audience, the educators and facilitators from various schools of Delhi and Chandigarh. The initiative by Next Education India is to make the teachers' prepare towards the requirements of the New Age Teaching Learning practices. Also the workshop had conducted brainstorming sessions to deliver the means of making education delivery more engaging, fascinating and interactive for the audience in the classrooms. Over 80 participants from various schools had been part of the session.

Next Education, a K-12 focused technology based education solution provider, has created innovative products that make teaching – easy, engaging and effective. Its leading products such as TeachNext, LearnNext, MathsLab, ScienceLab, RoboticsLab and English Lab are used in over 6000+ schools across country transforming the lives of more than 6 million+ students. Next Education products are mapped to cover CBSE, ICSE and 23 state boards in 8 major Indian languages.

The 21st century innovative learning is not limited to a physical space but an open learning scenario with preface to one's comfort at his reading home at home or a TV room at large. It is very much unlike the classroom learning with a same group all days, all the time. Here the

community is different and the learning is more spectacular further. Here the teacher concerned is the one who has to be engaged and involved in the conversations as a leader or a facilitator further. As per the demands and researches, the challenge is to create an integrated education system that:

- Provides access to quality education that is practical, relevant, customized and effective.
- Can adopt tech-based innovative ways to provide faster expansion of opportunities of education to all.
- Looks for bridging the gap between education and employability.
- Promotes social equality/economic viability.
